

Nazmul Haque Turja

nh.turja@gmail.com · Newark, Delaware, USA

Education

PhD in Electrical and Computer Engineering

University of Delaware

Newark, Delaware · August 2026 – Present

Research focus: Hardware security.

MS in Electrical Engineering

New Mexico State University

Las Cruces, New Mexico · August 2021 – May 2023

Master's project: Utilizing CPI Breakdown for Bottleneck Analysis of Power9 Processor Performance

BS in Electrical and Electronic Engineering

Bangladesh University of Engineering and Technology

Dhaka, Bangladesh · July 2014 – April 2019

Major: Communication Engineering. Thesis: A Secured Offline Online Approach for Internet of Things (IoT) Using Real-time Database.

Experience

Graduate Research Assistant

University of Delaware · Department of ECE

Newark, Delaware · Upcoming · starts October 1, 2026

GPU Logic Design Engineer

Intel Corporation

Folsom, California · July 2023 – September 2026

- Conducted functional pre-silicon verification for discrete, integrated, and HPC GPUs, focusing on 3D render and compute pipelines.
- Owned end-to-end validation of Intel Xe-Core ray tracing and texture sampling features, including test planning, test development, and coverage closure.
- Used UVM methodologies and debugged regression failures in simulation and emulation, collaborating with design and architecture teams.

Graduate Assistant

New Mexico State University · Department of ET and SE

Las Cruces, New Mexico · January 2023 – May 2023

- Instructed Communication Systems I (ET 314) theory and lab sessions and mentored students on assignments and projects.

Graduate Technical Intern

Intel Corporation

Folsom, California · May 2022 – December 2022

- Addressed power flow analysis (ptpx) issues for low-power Intel Xe-Core Sampler designs.
- Managed regressions for the Meteor Lake Sampler CLT out-of-order feature and identified two silicon hangs.
- Developed UVM testbenches and worked with gnr, elab, and runsim tools.

Graduate Research and Teaching Assistant

New Mexico State University · Department of ECE

Las Cruces, New Mexico · August 2021 – May 2022

- Applied machine learning to basic block count prediction with NVBit-supported PPT-GPU for PolyBench, Rodinia, Pannotia, and LULESH workloads.
- Collaborated with Los Alamos National Laboratory on reuse distance and memory tracing toolkits for PPT-GPU, and with Sandia National Laboratories on LDMS sampling for IBM Power9.
- Taught electronics, digital circuit design, and VHDL to more than 50 students.

Adjunct Faculty

BRAC University · Department of CSE

Dhaka, Bangladesh · February 2021 – September 2021

- Taught VLSI Design (CSE 460) and Digital Electronics and Pulse Techniques (CSE 350), including labs with Proteus, Quartus II, Microwind, and ModelSim.
- Worked on IoT applications for healthcare and agriculture under Dr. Farhad Hossain at BUET.

Semiconductor Engineer

Nelsite Inc. Ltd.

Fukuoka, Japan · November 2019 – April 2020

- Developed embedded systems with 32-bit ARM Cortex-M4 microcontrollers, Keil, and embedded C.
- Received on-the-job training in semiconductor fabrication and material characterization.

Technical skills

Languages: CUDA, OpenCL, Python, Embedded C/C++, VHDL, SystemVerilog, Go, Lex, Yacc, LaTeX.

Software and tools: Verdi, UVM, NumPy, Pandas, TensorFlow, Keras, scikit-learn, Linux, Eagle, Proteus, Quartus II, Cadence, OpenCV.

Selected coursework

Computer engineering: Advanced Computer Architecture, Application of Parallel Programming, ASIC Design, Hardware and Software Co-design, Compiler Transition, Computer Architecture, VLSI, Microprocessor and Interfacing, Analog and Digital Electronics.

Artificial intelligence: Application of Machine Learning, Deep Learning, Random Signal Analysis, Linear Algebra, Probability and Statistics.

Awards

Battle of Hardware (IoT) — Champion, CSE Festival 2018, BUET.

Selected projects

RTL Medic

Research on hardware design and verification using LLMs and AI agents. Ongoing collaborative research.

Hardware validation with ASMD

State-machine reasoning for hardware verification. Completed a hardware design-validation project.

Cache memory simulator

A C++ simulator for exploring cache organizations. Built a configurable cache simulation implementation.

MIPS compiler project

Exploring compilation with abstract syntax trees. Completed the course implementation.

An 8-bit computer

A Simple As Possible computer simulated in Proteus. Designed and simulated the computer.

General-purpose shift register

A small digital design with multiple data-movement modes. Produced the register design with the three operating modes.

Indoor wayfinding wearable

A wearable project for people with Alzheimer's disease. Built a wearable prototype.
